

Welcome

The Center for Hearing & Balance is unique to northeastern Pennsylvania, offering coordinated and comprehensive services devoted specifically to diagnosing, treating, restoring and maintaining the function of the auditory and vestibular systems.

Within our facility, nationally certified audiologists, researchers, faculty, and doctorate clinicians have access to the latest treatment modalities and research protocols to aid in the diagnosis and treatment of hearing and balance patients.

The Goal of our Center is to provide quality, research based, hearing and balance testing, treatment, and information. Our facility provides services for newborn through the geriatric population.

 - Health Fairs

Hearing Aids

Hearing aids come in a variety of styles and with a wide range of functions and features to address an individual's specific needs. The effectiveness of modern digital hearing devices comes from a powerful combination of professional expertise, software, and hardware. Contact our facility for an appointment to discuss your hearing treatment options.

Balance

Dizziness or a feeling of being off-balance can present a challenge to anyone. When a subject presents with dizziness, or vertigo, useful information can be obtained from monitoring their eye movement. At the Center for Hearing & Balance Center, our highly-trained team of specialists provides evaluation and treatment of the dizzy patient. Tests includes Rotational Chair, Videonystagmography, and Dynamic posturography.

Tinnitus

Tinnitus is a condition that causes you to hear ringing, buzzing, hissing, roaring or whistling, even when there is no apparent source of these noises. Tinnitus can cause you frustration, depression and stress and negatively affect your overall quality of life. It can also disrupt many of your daily activities, such as work, spending time with your family or watching your favorite TV shows. Tinnitus requires a thorough evaluation and counseling for determination of a patient-centered treatment plan.

Pediatric Hearing

Our center provides comprehensive diagnostic and treatment

services to children of all ages with known or suspected hearing loss.

Our facility works with a multidisciplinary team with the primary goal to help children with hearing loss develop their communication skills to the fullest potential.

Pediatric Services provided:

- Diagnosing hearing loss in infants using state-of-the-art technology
- Identifying and monitoring hearing loss in children of all ages
- Providing education to the family on hearing loss and its consequences
- Assessing amplification needs, including hearing aids, FM systems, and assistive technology fitting and follow-up
- Providing diagnostic therapy to aid in verification of the benefit provided by amplification
- Evaluation of auditory skills
- Consulting with educators in local school programs
- Developing materials for reinforcement of therapy goals at home
- Follow-up screening for newborn hearing
- Otoacoustic Emissions
- Auditory Brainstem Response
- Play Audiometry
- Visual Reinforcement Audiometry
- Multifrequency Tympanometry
